LTSV - Rail Data - Pool List

Key	
Code	Most pools are identified by a 4-character code. Codes made-up of numbers are assigned to freight rolling stock, while codes made-up of letters are assigned to locos, coaches, units etc.
Description	The specific meaning of individual codes can change over time. The last known description for each code is shown here, though this may not be the current meaning.
Date	The date of the most recent information about the pool.
Qty D	The LTSV website can show multiple descriptions for each pool. This column shows how many descriptions have been recorded for each code. Note that the inclusion of multiple descriptions does not neccesarily indicate that the meaning has changed.
Qty L	The LTSV website uses "Listings" to relate rolling stock numbers to pool codes (and other information). This column shows how many listings reference each pool code.

Code	Description (last known)	Date	Qty D	Qty L
