Introduction

About this document

This document contains a basic list of all known service vehicles operated by London Transport, its successors and associated companies. It is one of several that take their information from the LTSV website (www.ltsv.com) and is updated to 20th October 2016. The other documents can also be downloaded from the LTSV website and include the following:

- **Part 2** gives fuller details of all vehicles, including (where known) such information as suppliers, disposals and allocation histories
- **Part 3** contains the captioned photographs that have been published on the website
- **Part 4** has a full list of service vehicle locations and also the news and forum sections from the website

LTSV has accumulated a large amount of information over the years. By making these documents available for download it is hoped that the content can be preserved even if something happens to me or my website.

This second edition has been amended to include vehicle chassis and body numbers in certain tables. Chassis numbers were recorded for vehicles bought by London Transport up until the mid-1980s, while body numbers were assigned until 1964. Also added are allocations for current vehicles and a table of location codes (featuring only locations with a current allocation). Columns which are not relevant to a particular table have been removed to save space. For example, all vehicles numbered 1 to 999 were operated by London Transport, so this information is given in the table heading rather than being repeated against every entry.

This document will be re-issued perhaps once or twice a year with updated content. However, for the latest information, please refer to www.ltsv.com.

What are Service Vehicles?

Service vehicles are defined as the road vehicles (for example cars, vans and lorries) used in support of the bus and tube operations in the London area. For many years these services were provided by London Transport and, although that body no longer exists, the title 'London Transport Service Vehicles' is used to conveniently group the various organisations now involved.

London Transport also ran trams (until 1952) and trolleybuses (until 1962), and vehicles that supported those networks are included. More recently, Transport for London has taken over the running of the Croydon Tramlink, the London Overground routes and certain elements of road management. Vehicles used by each of these sections can be found listed within.

For a much more detailed account of the history, structure and composition of the service vehicle fleet, the following book is recommended:

- London Transport Service Vehicles, A history by Kim Rennie and Bill Aldridge, Capital Transport Publishing, 2003

Service Vehicle Numbering Series

The information in this document is spread across 14 main tables, each covering a different portion of the fleet.

Table 1 - Pre-1939 Numbered Vehicles	Up until 1939 London Transport (and its predecessors) used a variety of numbering schemes for service vehicles. Details are incomplete and research is ongoing. Vehicles that were re-numbered in 1939 (see below) are listed in Table 2 but a cross-reference is provided against their previous fleetnumber.
Table 2 - Owned Vehicles	From September 1939, the existing fleet was numbered into a new series, starting at 1 and with suffix letter/s to indicate the manufacturer. This series was used until 2008, although from 1982 onwards the majority of smaller vehicles were leased instead of bought (see Table 3).
Table 3 - Leased Vehicles	From 1982 onwards, smaller vehicles were leased and were numbered in a new series starting at 3000. This series remains in use today.
Table 4 - Vehicles Numbered in Other Series	A small number of vehicles have been given fleetnumbers in other series, for example B90 and B91 are British Transport Police callsigns, L84, L85 and TMM774 are railway rolling stock numbers.
Table 5 - Miscellaneous Vehicles	This section covers trailers, demountable lorry bodies and sweeper vehicles, all of which are numbered in their own series.
Table 6 - Un-numbered Vehicles	Some service vehicles were not given fleetnumbers, notably motorcycles and equipment like diggers. More recently this series has included cars operated by TfL Streets and lorries bought by LUL since 2008. It is not clear why some vehicles are given fleetnumbers when apparently similar ones are not. Also included in this section are leased vehicles for which the fleetnumbers are not yet known.
Table 7 - 'Private' Cars	These were cars bought by London Transport but operated without markings, and often allocated to a particular member of staff. From 1980 these vehicles were gradually replaced by unmarked leased cars, which are not listed here. The colour of most of the cars is not known.

Table 8 - Former Buses	Some buses were converted for support roles and retained their original (or amended) fleetnumber. Examples include mobile shops and classrooms. Note that this section does not include converted buses that were given new fleetnumbers in the service vehicles series (these can be found in the relevant table) but it does include similar conversions operated later by the bus operating and engineering companies.
Table 9 - Hired Vehicles	For a few years I tried to keep track of hired vehicles in the central fleet (i.e. operating for LBSL or LUL), but the coverage is patchy and this section may eventually be dropped. Hired vehicles were either unmarked or carried the livery of their supplier (e.g. Dagenham Motors).
Table 10 - LCBS (London Country Bus Services) Vehicles	Between 1970 and 1986, bus services in the area around London were provided by LCBS, and they had their own service vehicle numbering scheme. In 1986 LCBS was split into four separate companies. Their vehicles are listed in Table 11.
Table 11 - Bus Company Vehicles	This section covers vehicles operated by the companies formed from the privatisation of LT and LCBS, companies that have run tendered bus services in London and other operators in the former LCBS area.
Table 12 - Other Company Vehicles	This section covers the bus engineering companies formed upon privatisation, the DLR and Tramlink (whilst they were independent) and the main bus recovery contractors.
Table 13 - Incorrect Fleetnumbers	Central fleet vehicles known to have carried incorrect fleetnumbers are listed here, showing the allocated and actual fleetnumbers.
Table 14 - Allocation Codes	Allocations are given for current vehicles only. This table lists the codes used for all locations with a current allocation. One and two letter codes are official (mainly bus garages), three-letter codes have been created for other locations.
Table 15 - Vehicle Registration Number Index	To help locate particular vehicles, this table lists all vehicles in registration number order.

Conventions, Acronyms and Abbreviations

In the fleetnumber column, a single asterisk (*) indicates that the allocated fleetnumber was not actually carried, while two asterisks (**) indicates that the vehicle carried an incorrect fleetnumber (see Table 13 for the actual numbers carried). Missing or wrong suffix letters (e.g. 4543F carried 4543V) are not counted as incorrect fleetnumbers. Subscript numbers (eg 6123F₁) indicate cases where duplicated fleetnumbers were allocated.

In the registration column, *TP* indicates that the vehicle carried trade plates (refer to Part 2 for details). Note that some vehicles shown with a registration number may also have carried trade plates at times.

In the body number column (*Plan*) indicates a body number that was planned but not actually used. Where more than one more body number is shown the vehicle was rebodied. See Part 2 for further details.

Where a vehicle had a change of fleetnumber, registration, operator or livery during its lifetime, the later (or final) details are generally shown. For more details on individual vehicles, refer to Part 2.

Abbreviations are used only where necessary and are generally limited to vehicle features as follows:

4WD or 4x4	Four Wheel Drive	FWD	Front Wheel Drive	RWD	Rear Wheeldrive
C/C	Crew-Cab	LWB	Long Wheelbase	SWB	Short Wheelbase
ECF / EL	Extended Chassis Frame / Extended Length	MWB	Medium Wheelbase	T/L	Tail-List

Abbreviations are also used in the livery column where space dictates, but these should be easy to decipher. A hash sign (#) after the livery indicates that the vehicle carried no markings. A letter E after the livery indicates Emergency markings (usually red/white battenburg striping).

Acronyms are used for certain operators as follows:

BCV	Bakerloo, Circle & Victoria (t/a Metronet)	LOROL	London Overground Rail Operations Ltd
BEL	Bus Engineering Ltd	LRT	London Regional Transport
BTP	British Transport Police	LSCP	London Safety Camera Partnership
DLR	Docklands Light Railway	LT	London Transport
JNP	Jubilee, Northern and Piccadilly (t/a Tube Lines)	LTA	London Transport Advertising
L&C	London and Country	LTB	London Transport Buses
L&D	Luton and District	LTM	London Transport Museum
LBL	London Buses Ltd	LUL	London Underground Ltd
LBSL	London Bus Services Ltd	SSL	Sub-Surface Lines (t/a Metronet)
LCBS	London Country Bus Services	TfL	Transport for London
LCNE	London Country North East	TfL H-ways	TfL Highways
LCNW	London Country North West	TfL PCO	TfL Public Carriage Office
LCSW	London Country South West		

London is sometimes shortened to Lon or L (for example 'Lon Central')

Sources of information

The information in this document has been drawn from a number of sources, including London Transport archive documents, lists supplied by LUL and the bus companies, information published by Capital Transport and LOTS (the London Omnibus Traction Society) and to a large extent by observations made by individuals and reported to the LTSV website.

If you spot any errors, or have any additional information, please get in touch by e-mailing me at tom@ltsv.com. This will help ensure that future editions (and the website) are more accurate and comprehensive.

Thomas Young, Abbey Wood, October 2016
